Service Level structure for EXCO

Rev 5.0

Signed contract

August 2026

Effective

6 services

Scored in Assure

17 KPIs

Live in product

What this pack answers

- What colour should EXCO expect on the estate — and why a tenant can be amber inside and red on the portfolio.
- Which clocks are in the signed SYSPRO Support & AMS contract (Layer A).
- Which operational KPIs we score from live collect (Layer B) — RMM, Cloud Backup, EndPoint Protection.
- Exactly how each KPI is calculated, what is excluded, and what is not a miss.

ONE RULE FOR THE ROOM

We only score services that are on Cover and have live rows. No Cover is blank — never red. Open ticket clocks are not a miss. Targets are targets, not guarantees (clause 7.5). This contract has no uptime %.

Layer A — Contract

SYSPRO Support & AMS Rev 5.0. Ticket clocks only. Business hours 08:00–17:00 local. No availability percentage. No service credits for missing a target.

Layer B — Operations

RMM, Cloud Backup and EndPoint Protection. Industry measures we can compute from last collect. Not in clauses 5.1 / 11.2 of the signed AMS contract.

Colour — RAG

Green ≥ 80 · Amber 55–79 · Red ≤ 54 .
Colour follows the worst covered service.
A No Cover pillar never paints the tenant red.

What you look at on the estate

Customer Ecosystem (portfolio)

Average of covered, scored services only. Microsoft 365 is posture — it is not in the EXCO average.

Inside a customer

Same RAG bands, same KPI math. If a pillar has Cover but no devices, it is not scored.

Cover vs No Cover

Cover = we have a live feed for that service. Tickets are always Cover; empty feed shows “no tickets for this customer”.

Heads-up / robot

Worst covered service wins the colour. Number is floored into that band so a red service cannot look green.

Scoring hygiene — what is never a miss

- No Cover for Devices — 0 servers, 0 backup devices, 0 endpoints: excluded, not red.
- Open ticket clocks — still inside the window: held, not a breach.
- P4 restore — by agreement: not scored.
- Backup job that fails then succeeds inside the 24h RPO: still compliant.
- Recovery Testing with no API timestamp: In plan — not scored as a miss (emails still fire).
- Microsoft 365 Secure Score / MFA: operational posture only.

Business Hours = 08:00–17:00 on a Business Day (8 BH). Measured as a monthly average. Restoration includes a reasonable workaround.

Pri	Name	Means	Acknowledge	Remote start	Restore
P1	Critical	System down or a core process stopped for many users. No workaround.	30 minutes	1 Business Hour	8 Business Hours
P2	High	Major function impaired. Workaround difficult or impractical.	30 minutes	2 Business Hours	2 Business Days
P3	Medium	Impaired for one or a few users. Workaround available.	2 Business Hours	8 Business Hours	5 Business Days
P4	Low	Minor, query or cosmetic. Little or no business impact.	4 Business Hours	2 Business Days	By agreement

Signed clocks in business minutes · 08:00–17:00 SAST

AcknowledgeRemote startRestore

Security administration (same contract)

These are AMS tasks, not ticket clocks — still Layer A.

User creation	2 Business Days
User modification (roles, permissions, licences)	2 Business Days
User termination / deactivation	1 Business Day — same day if received before 12:00 and marked urgent

KPI targets EXCO is looking for

KPI index — every line Assure scores today

Service	KPI	Target	Contract	How Assure computes it
RMM	Server uptime	99.9%	Yes	30-day offline hours, else online snapshot. Servers only.
RMM	Agent coverage	≥ 99%	Yes	Servers reporting (online or last-seen ≤ 15 min).
RMM	Patch compliance	≥ 95%	No	Servers with zero outstanding critical/important.
RMM	Disk pressure	0 at ≥85%	No	One hot volume is a miss on that server.
Backup	Job success	99.5%	Yes	OK ÷ (OK + failed). Warning inside RPO = OK.
Backup	RPO 24h	100%	Yes	Last success within 24 hours. Stale = miss.
EPP	Protection coverage	≥ 98%	Yes	Managed ÷ (managed + unmanaged).
EPP	Definition currency	≥ 95%	Yes	Signatures current, or last scan ≤ 24h.
EPP	Open criticals	0	No	Each open critical/high deducts 20 pts.
SYSPRO	Job logging	0 errors	Yes	Each error –8 pts.
SYSPRO	FinSight control	0 OOB	Yes	Each out-of-balance line –10 pts.
SYSPRO	Collect freshness	≤ 24h	No	≤24h green · ≤48h amber · then miss.
Tickets	First response	≥ 90%	Yes	vs P1–P4 acknowledge, last 30 days, SAST BH.
Tickets	Restore / resolve	≥ 90%	Yes	P1–P3 restore clocks. P4 not scored.
Tickets	Open book	Owned	No	Each open ticket –5 pts (floor 40).
M365	Secure Score	≥ 70%	No	Posture only — not in EXCO average.
M365	MFA registration	≥ 95%	No	Registered ÷ capable.

RPM Remote Management

Headline 99.9% monthly uptime

Server uptime / availability

99.9% standard

Unplanned downtime vs period. Prefer 30-day offline hours from RMM. Else servers online ÷ classified servers. Each critical alert -12 pts (cap -40). Workstations excluded.

Agent / monitoring coverage

≥ 99%

Classified servers with a reporting agent — online, or last seen within 15 minutes.

Server patch compliance

≥ 95%

Servers with zero outstanding updates ÷ servers that report a patch count. Click-through lists KB titles.

Disk pressure

0 servers ≥ 85%

One volume at or above 85% used is a miss on that server. IOPS is collected but is not an SLA line.

NOT SCORED / EXCLUDED

· Planned maintenance with 48–72h notice.

· Client power / ISP / third-party cloud outages.

· 0 servers = No Cover for Devices, not scored.

RPM Cloud Backup

Headline 99.5% success · 24h RPO

Backup success rate

99% – 99.9%+

OK jobs ÷ (OK + failed) on latest collect. A warning that still meets RPO counts as OK.

RPO — standard servers / files

4–24h (we score 24h)

Devices whose last successful backup is within 24 hours. Stale devices miss RPO.

Restore tests (visibility)

In plan — not a miss

Recovery Testing / Standby Image is shown on the device. Continuity session time is not on the statistics API, so restore % is not scored as a miss.

NOT SCORED / EXCLUDED

· Offline devices, full disks, app locks on the client.

· Fail then succeed inside RPO = still compliant.

· 0 devices = No Cover for Devices, not scored.

RPM EndPoint Protection	
Headline 98% endpoints managed	
Protection coverage	≥ 98–100%
Managed ÷ (managed + unmanaged) from last EPP collect.	
Definition / content updates	≥ 95–99% in 24h
Product + signatures current, or last successful scan within 24 hours. Missing flags on a managed endpoint count as current.	
Open critical incidents	0 open criticals
Open critical / high incidents on the EPP feed. Operational, not a nines target. Each open –20 pts.	
Installed modules (visibility)	Policy roll-up
Modules turned on in policies assigned to the customer. Not an SLA score — EXCO can see what is actually licensed on.	
NOT SCORED / EXCLUDED	
· Detection-efficacy % is not contractual.	
· Endpoints the client has not approved.	
· 0 endpoints = No Cover for Devices.	

SYSPRO · AMS health	
Headline 90% jobs clean · FinSight in control	
Job logging	0 failed / error jobs
SYSPRO job error count on last collect. Each error deducts 8 points (floor 0). Ticket clocks sit on Customer Tickets, not here.	
FinSight control	0 out-of-balance lines
Open FinSight recon lines. Each line deducts 10 points (floor 0).	
Collect freshness	Last collect ≤ 24h
Hours since last SYSPRO import. Green ≤ 24h, amber ≤ 48h, then a miss.	
Build / companies (visibility)	Licence XML + company DBs
Build from AdmSystemLicense / RawXml. Companies from live company databases — not an SLA line.	
NOT SCORED / EXCLUDED	
· Demo or deferred companies not scored.	
· Hotfixes and SQL instance health are visibility.	
· No Cover = pillar omitted from EXCO average.	

Customer Tickets	Headline 90% response · 90% restore
Acknowledge / first response ≥ 90% in clock Freshdesk first-response vs P1–P4 acknowledge minutes in SAST business hours. Last 30 days. Open clocks inside the window are not scored. Restore / resolve ≥ 90% in clock Resolved tickets vs P1–P3 restore. P4 restore is by agreement and is not scored. Open tickets Owned, inside clock Open count. 0 open = 100%. Each open ticket –5 pts (floor 40) — operational pressure, not a restore miss.	
NOT SCORED / EXCLUDED	
· Unmapped Freshdesk companies do not land on a customer. · Open clocks are not a miss until they expire. · Empty feed: Cover stays on, pane says no tickets.	
Microsoft 365 · posture only	Not in the EXCO SLA average
Secure Score ≥ 70% of Microsoft max Current Secure Score ÷ max from Graph collect. Visibility of tenant hygiene. MFA registration ≥ 95% of capable users MFA registered ÷ MFA capable on the latest snapshot. Licence assignment Seats in use Assigned ÷ purchased. Unused seats are not a breach.	
NOT SCORED / EXCLUDED	
· M365 is not the signed SYSPRO + AMS contract. · Depends on Graph collect for that tenant. · Never rolls into the portfolio SLA number.	

How the number becomes a colour

GREEN 80 – 100 All covered services meeting or near target.	AMBER 55 – 79 A covered service is off target. Ask which KPI.	RED 0 – 54 A covered service is failing. Worst service wins.
--	--	---

1

Who is red, and is it Cover?

If a tenant is red, name the covered service. If the service has no devices, it should not be scoring — that is a mapping bug, not an outage.

2

Is the miss contractual or operational?

Ticket clocks, backup success, RPO, RMM uptime and EPP coverage are contractual / board-grade. Patch, disk, open-ticket pressure and M365 are operational.

3

Are we inside the clock or already late?

Open P1/P2 still inside acknowledge is amber pressure, not a breach. Breach is a closed clock that missed, or an open clock that has expired.

4

Did backup miss the 24-hour RPO?

A failed job that reran successfully the same day is still compliant. Stale last-success older than 24h is the miss.

5

Is SYSPRO the application or the ticket?

Job errors and FinSight OOB are AMS health. Response and restore live on Customer Tickets. Do not double-count.

6

What did we exclude on purpose?

Workstations from uptime. P4 restore. Continuity test timestamps the vendor API does not publish. Unmapped Freshdesk companies.

Clause reminder — say this if asked

Targets, not guarantees (clause 7.5). No service credits, set-off or termination right for missing a target. The signed contract covers SYSPRO Support + AMS only. Backups, infrastructure, OS, AD and cybersecurity are excluded from that contract (clauses 5.1 and 11.2) — we still operate and score them as Layer B so EXCO can see posture. This contract has no availability percentage.
