

How RPM Assure scores SLA

Multi-pillar SLA explained · compared to the SYSPRO Support & AMS Service Level Agreement (Rev 5.0, August 2026)

Multi-pillar SLA means Assure does not give one contract score. It scores each **service RPM actually runs** for that customer, then averages only those. The five menus always show. Only four can enter SLA. Microsoft 365 never does.

1. Which pillars enter the score

Pillar	Enters SLA?	On cover when	If No Cover
SYSPRO	Yes	Collect / operators / company databases present	Yellow “No Cover” — excluded from Overall
RMM (Pulseway)	Yes	Mapped organisation and devices	Excluded from Overall
Cloud Backup (Cove)	Yes	Mapped partner and backup devices	Excluded from Overall
EPP (Bitdefender)	Yes	Mapped company and endpoints	Excluded from Overall
Microsoft 365 CSP	Never	Tenant / Graph collect (posture only)	Shown on ExCo; Secure Score / MFA / GAs only

No Cover does not pull Overall down. Covered with no number (for example RMM with no classified servers) is a dash and is also excluded from the average. Overall is a simple average of covered pillars that have a percentage.

2. How each pillar is scored

Start at 100 (except RMM, which starts from servers online). Then deduct. Floor 0, cap 100, one decimal place. This is **operational posture** from live collect — not a ticket stopwatch.

SYSPRO — AMS health

Signal	Penalty	Note
No collect at all	−50	No last-import timestamp
Collect older than 24 hours	−35	Stale SYSPRO warehouse
Job errors	−(15 + 5 per error), max −40	Failed / error SYSPRO jobs
FinSight out-of-balance lines	−(10 + 2 per line), max −35	DTR / recon exceptions
None of the above	100	“SYSPRO controls clear”

RMM — servers only

Workstations never enter the SLA. If no servers are classified, the pillar is a dash even if workstations exist.

Rule	Formula
Base	(servers online ÷ all servers) × 100
Critical alerts	Minus 12 per critical alert, maximum −40
No servers	No percentage — dash — excluded from Overall

Cloud Backup

State	Score
Healthy	100
Failed or stale	35
Devices exist, status unknown	70
On cover, no signal yet	80

End Point Protection

State	Score
Managed ÷ total endpoints	That percentage
Endpoints mapped, no managed count	95
On cover, no rows yet	80

3. Worked example

Pillar	Inputs	Score	In Overall?
SYSPRO	Fresh collect · 0 job errors · 4 FinSight OOB	$100 - (10 + 8) = 82$	Yes
RMM	4 of 5 servers online · 1 critical	$80 - 12 = 68$	Yes
Backup	No Cover	—	No
EPP	No Cover	—	No
Microsoft 365	Ignored for SLA	—	No
Overall	Average of scored pillars only	$(82 + 68) \div 2 = 75\%$	—

Backup and EPP did not dilute the score. That is the rule applied to every customer: same menus, Covered or No Cover, only covered legs in Overall.

4. Two different “SLAs” inside Assure

Surface	What it measures	Matches Martin’s SLA doc?
ExCo — SLA Stats by Customer	Multi-pillar posture (this briefing). Live collect. SYSPRO / RMM / Backup / EPP.	No — this is operations, not ticket clocks.
Customer → AMS → SLA	Wants respond / resolve clocks. If no desk feed, derives availability and compliance from health RAG and still prints a 99.5% target.	No — Rev 5.0 has no uptime % and uses Acknowledge / Remote / Restore in Business Hours.

One-line distinction. Multi-pillar SLA asks: *are we delivering each product we sold?* The signed SLA asks: *did we acknowledge a P1 in 30 minutes?* Assure scores the first well. It does not yet measure the second.

5. Signed SLA (Rev 5.0) vs Assure scoring

Martin’s contract	Assure multi-pillar score
No uptime percentage. Targets, not guarantees. No service credits (clause 7.5).	ExCo uses a 0–100 posture %. AMS page still shows a 99.5% “agreed target” when derived.
Three clocks: Acknowledge / Remote / Restore. P1 = 30 min / 1 BH / 8 BH.	Two clocks on AMS page: Respond / Resolve. Defaults 60 min / 4 hours — different table.
Business Hours only (08:00–17:00, local).	No BH vs after-hours split in the score.

Martin’s contract	Assure multi-pillar score
Scope = SYSPRO Support + AMS (Sections 3–4). Infra, backup, cyber excluded (5.1, 11.2).	Scores Backup and EPP when on cover. Correct as estate posture; not this contract.
AMS 4.2–4.8: jobs, setup change, recon, SQL, platform servers, day-end, hotfixes, monthly health.	Jobs, OperAmend, FinSight, hotfixes, health, RMM servers map cleanly. Day-end is not a first-class tile.

6. What to show whom

Audience	Use
ExCo / internal	Multi-pillar table. All five menus. Covered / No Cover. Overall from covered legs only.
Customer pack against the signed SLA	SYSPRO + AMS evidence only (jobs, FinSight, health, hotfixes, operators). Print P1–P4 as in the document. Do not print 99.5% or Backup/EPP as contractual SLA.

Source: RPM Assure scoring in `exco-sla-stats.ts` (`buildExcoPillarSla`) and the SYSPRO Support & Application Management Services SLA template, Revision 5.0, August 2026 (Martin Richards). This briefing is internal and does not amend the contract.
