Syspro System Error Analysis- Previous 12 months

A trend analysis for the areas being effected in SYSPRO over a period of 12 months. A trend on the decline shows that of a healthy system. A trend on the rise shows a system in a vulnerable state.

Error	12 month Trend	Jul 25	Aug 25	Sep 25	Oct 25	Nov 25	Dec 25	Jan 26	Feb 26	Mar 26	Apr 26	May 26	Jun 26	Tot.
Client-Server failure		26	15	22	18	27	40	23	31	23	23	27	24	299
Forced log-out		0	0	2	0	0	3	0	3	3	1	0	0	12
Run-time system error		0	0	0	1	0	0	0	0	0	0	0	0	1
Total		26	15	24	19	27	43	23	34	26	24	27	24	312

Error Analysis by top 10 module - Prev 12 months

A trend on the rise shows modules in a vulnerable state, these need to be investigated and corrective measures put into place to reduce the number of failures. Modules with high errors month on month should be focused on first.

Error module	12 month Trend	Jul 25	Aug 25	Sep 25	Oct 25	Nov 25	Dec 25	Jan 26	Feb 26	Mar 26	Apr 26	May 26	Jun 26	Tot.
PO Entry		4	3	4	3	4	3	1	4	3	3		2	34
SO Entry				2	6			4	16	6	4	16	6	60

SNR-CAPETOWN-04	Total	74	48	83	42	58	128	86	90	59	98	106	77	949

Forced log-outs

Forced logouts should be avoided - an operator logged out whilst in a transaction may cause a client server failure and potentially a SQL rollback. If these occurrences are high an alternative process should be implemented to get users out of the system safely and without risk.

Users forced out	Sep 25	Dec 25	Feb 26	Mar 26	Apr 26	Tot.
FA	0	0	1	1	0	2
NK	0	2	0	0	0	2

Syspro GL and Sub variances (Datarapt variances)

The variances below indicate a potential imbalance between the sub ledger and ledger, variances **must** be investigated corrected. DATARAPT has been provided as part of AMS for you to use as a tool to correct the imbalances.It's also important to note that this is a rolling variance and not the month to date variance.

Period	Module	Refresh Date	Module Balance	GI Balance	Unposted Journals	Current Var.	Total Var.

SQL Information		
Server Name	SQL Instance version	SQL version
SNR-CAPETOWN-04	MSSQLSERVER - Standard Edition (64-bit) 16.0.1180.1 RTM	SQL2022

SQL Adminstrator Accounts	
Server Admin user accounts	Count of admin accounts
SNR-CAPETOWN-04	
dbcreator	2
sysadmin	15
Administrator accounts are a security risk and should be allocated sparingly. Passwords should be complex and secure.	

Database Roles (see appendix for details)		
Database roles by Server	Databases per Role	Accounts per Role
SNR-CAPETOWN-04		
db_owner	11	6
db_datareader	12	31
db_denydatawriter	6	4
db_datawriter	11	4

SQL Status Information						
Sql Server Status				Checks within the previous 24 hours		
Database count	Managed Databases	Managed Backups	SQL Status	Data updated	Backups	Integrity Checks
SNR-CAPETOWN-04 - MSSQLSERVER :						
28	27	26	!	✓	✓	✓

Top 5 largest SQL databases				
Server Name	Database	Size Check	size	% of Tot.
SNR-CAPETOWN-04 - MSSQLSERVER				
	riteSCAN8		81.17	52.4%
	SysproCompanyS		26.06	16.8%
	SysproCompany1		22.80	14.7%
	AUTOEDISCC		8.22	5.3%
	SysproCompanyV		4.31	2.8%
	Top 5 largest databases:		142.55	92.0%
	All Other db		12.40	8.0%
	All databases: SNR-CAPETOWN-04		154.96	

In the above table if the Size Check is **RED** then it means that EOH will proactively investigate the problem but when it's **GREEN** it means that no investigation is required. When it is **YELLOW** it means it could potentially become red over time.

Top 3 largest SQL tables per database		
Server Name	Table	size
SNR-CAPETOWN-04 : riteSCAN8

	Top 3 largest tables :	0.47

Top 3 largest SQL tables per database		
Server Name	Table	size
SNR-CAPETOWN-04 : Sysproddb		
	SrsReporting	0.13
Top 3 largest tables :		0.13

Triggers on SQL Database tables			
Triggers can degrade SQL performance and may not always fire if the table is used intensively. Use triggers only after testing and only when there is no other alternative.			
Database	On Table	Trigger Name	On Event
Server: SNR-CAPETOWN-04			
SysproCompanyS	dbo.ArTrnDetail	trg_ArTrnDetailp_AI	Insert
	dbo.GenJournalCtl	TG_GenJournalCtl_INSERT	Insert
	dbo.GenJournalCtl	TG_GenJournalCtl_UPDATE	Update
	dbo.SorDetailRep	trg_SorDetailRep_AI	Insert
SysproCompanyU	dbo.ArTrnDetail	trg_ArTrnDetailp_AI	Insert
	dbo.GenJournalCtl	TG_GenJournalCtl_INSERT	Insert
	dbo.GenJournalCtl	TG_GenJournalCtl_UPDATE	Update
	dbo.SorDetailRep	trg_SorDetailRep_AI	Insert
SysproCompanyV	dbo.SorDetailRep	trg_SorDetailRep_AI	Insert

SQL Scripts using NOLOCK or READPAST					
The NOLOCK table hint allows the SQL query optimiser to read a given table without obtaining an exclusive or shared lock. Execution of scripts without the "with (NOLOCK <or READPAST>)" hint could result in the tables being locked for the duration of the script execution causing Syspro to become unresponsive. NOTE: the use of (NOLOCK) without "WITH" is a deprecated feature and will be removed in future versions of SQL Server.					
Database	Sql Object Type	Sql Object Name	No. tables referenced	No. of Nlocks or Readpasts used	Tables Referenced
Server: SNR-CAPETOWN-04					
SysproCompanyS	Sql Stored Procedure	Custom_Grn_Word_Data_New	7	0	ApSupplier, GrnDetails, GrnJournal, InvJournalCtl, InvMaster, LotTransactions, PorMasterDetail

SQL Scripts using NOLOCK or READPAST

The NOLOCK table hint allows the SQL query optimiser to read a given table without obtaining an exclusive or shared lock. Execution of scripts without the "with (NOLOCK <or READPAST>)" hint could result in the tables being locked for the duration of the script execution causing Syspro to become unresponsive. NOTE: the use of (NOLOCK) without "WITH" is a deprecated feature and will be removed in future versions of SQL Server.

SQL Scripts using NOLOCK or READPAST

The NOLOCK table hint allows the SQL query optimiser to read a given table without obtaining an exclusive or shared lock. Execution of scripts without the "with (NOLOCK <or READPAST>)" hint could result in the tables being locked for the duration of the script execution causing Syspro to become unresponsive. NOTE: the use of (NOLOCK) without "WITH" is a deprecated feature and will be removed in future versions of SQL Server.

SQL Scripts using NOLOCK or READPAST

The NOLOCK table hint allows the SQL query optimiser to read a given table without obtaining an exclusive or shared lock. Execution of scripts without the "with (NOLOCK <or READPAST>)" hint could result in the tables being locked for the duration of the script execution causing Syspro to become unresponsive. NOTE: the use of (NOLOCK) without "WITH" is a deprecated feature and will be removed in future versions of SQL Server.

SQL Scripts using NOLOCK or READPAST

The NOLOCK table hint allows the SQL query optimiser to read a given table without obtaining an exclusive or shared lock. Execution of scripts without the "with (NOLOCK <or READPAST>)" hint could result in the tables being locked for the duration of the script execution causing Syspro to become unresponsive. NOTE: the use of (NOLOCK) without "WITH" is a deprecated feature and will be removed in future versions of SQL Server.

SQL Scripts using NOLOCK or READPAST

The NOLOCK table hint allows the SQL query optimiser to read a given table without obtaining an exclusive or shared lock. Execution of scripts without the "with (NOLOCK <or READPAST>)" hint could result in the tables being locked for the duration of the script execution causing Syspro to become unresponsive. NOTE: the use of (NOLOCK) without "WITH" is a deprecated feature and will be removed in future versions of SQL Server.

Long-Running Processes

last long running process detected on 03 Jun 2026. 10 event/s in the previous 6 months

Long running processes in the Syspro databases are often a cause of the Syspro application becoming unresponsive. SQL queries which cause table locks can be the culprit. Other causes are Syspro users who have been logged out by an admin account, excel queries opened in the excel query designer , insufficient server resources or just poorly designed SQL queries. Whatever the cause, it needs to be investigated and corrected.
